

Íntrödýctiön

This was general wildlife trip with a distinct mammal bias, organised directly with . http://www.birdandwildlifeteam.com/ although they said April was a good month to visit, I think it would have been less weather interruptions in March.

They were not the best at communicating when organising the trip so you need to persevere and they messed up the pick up from the hotel. But the guide (Dulan) was knowledgeable; transport was good (apart from the accident), but we were in the dark quite a lot about targets, plans etc. But it was generally a good trip.

We flew with Emirates via Dubai which was fine.

All other accommodation booked in advance with Booking.com.

Temperatures were high, upper 20's in the night and mid 30's in the day, we had some rain and humidity was very high.

The photos are hyperlinked to larger versions.

Ďiary

7th April 2018

We arrived mid-afternoon and went straight to our hotel on Negombo lagoon, and spent the afternoon watching the birds on the lagoon from our balcony and the bar. Little cormorant, whiskered terns and a selection of egrets. House crows and common mynas in the gardens along with a palm squirrel the first mammal of the trip and common house gecko to start the herp list off. We had an early night.

8th //pril 2018

Unfortunately our pickup at 6am did not arrive, they had gone to the wrong hotel so it was 8am when we finally set off we made a quick stop for a drink spotting a crested serpent eagle. We made a quick stop at a wetlands that held a good selection of waterbirds, a few dragonflies and the first butterflies of the trip, plain tiger one I recognised others ID later. We made it to our destination in Sigiriya, where an Indian grey mongoose crossed the road as we arrived. After a spot of lunch we took a wander round the hotel grounds which was full of life. Water and land monitor lizards, Tickell's Blue flycatcher, a nice selection of dragonflies and a troop of Grey Langurs, but the highlight was a mother and young Indian grey mongoose. We took a drive into the park to do some birding with Crimson flameback, Sri Lankan Green Pigeon, Crimson Fronted Barbet, peregrine falcon, Grey Hornbill and a selection of other birds . Dusk fell and we headed to another site where we watched a Sri Lankan Giant Flying Squirrel emerge from its nest hole. We did a walk round the environs of the hotel looking for civets but found a nice Grey slender loris which showed very well.

After Dinner we headed out on a night drive spotting several birds such as Indian pitta and Blyth's reed warbler and a brown fish owl. Mammal wise it was slow a couple of small Indian civets and a white spotted mouse deer, but the highlight was two jungle cats which showed quite nicely. By 3am we were getting tired so we headed back but made a few diversions and added chital and sambar before making it back at 4am.

Índian Grey Mongoose

Índian Þilla Grey Slender Löris Jýngle Cal

We were up early for a quick breakfast and did a walk round the grounds, a nice selection of birds were present from Indian pitta, Malabar pied hornbill, greater coucal, yellow billed babbler, white browed bulbul. We then headed out to some local sites for some bird specialities. Red backed flameback, white naped woodpecker, Sri Lankan Woodshrike, then we headed to a selection of bat roosts, from buildings to caves we had Rufous horseshoe, dusky and Schneider's Leaf nosed bats, and two tomb bat species to name a few.

We had some lunch, the other group being led by Birds and Wildlife arrived at the hotel and joined us for lunch. It was then time for a quick siesta before heading back out for a few hours before dusk. A nice selection of butterflies in the forest Tamil Yeoman, common sailor, blue Mormon, gladeye bushbrown, common crow amongst them. Birdwise black hooded oriole, brown capped babbler, white breasted kingfisher, brown headed barbet, white browed fantail and a feeding crested serpent eagle. We had some nice purple leaf faced monkeys, also a nice rock skink and bark gecko before we headed back to the hotel for dinner.

The night drive started off slow a few roosting birds, Indian Pitta, Orange headed thrush, tailorbird and some nocturnal birds brown wood owl, brown fish owl and Jerdon's nightjar. The mammals started to come Indian Gerbil, long tailed climbing mice, black rat then Indian small civet, a few chevrotains and some chital. It started to get good when we spotted a Rusty spotted cat and golden palm civet then the highlight of the evening a pair of fishing cats, which showed nicely. The other group arrived but the fishing cats had gone and we called it a night finish at 5.30am.

Sri Lanka Wöödfrög

Bar Winged Flycathcer Shrike

We had a lie in after our night drive with breakfast at 9am. We had a quick look round the hotel gardens finding a nice Indian pitta. We headed off to some local birding sites large cuckoo shrike, common iora and a large number of butterflies. We headed back to the hotel for lunch, someone spotted a bark gecko by the restaurant. We had a leisurely lunch because at 2.15 we were going to release a Russel's viper into the jungle, this extremely venomous snake had been caught in the hotel grounds and needed relocating.

We did a walk round the local ruins which was very rich in wildlife, stork billed, common and white breasted kingfishers, Indian cormorants and a selection of the common species. We did find a checkered keelback water snake and all three monkey species. The best find was a cracking brown fish owl which showed very nicely, and we headed back for dinner at the hotel

The night drive was successful with wild boar, chital, white spotted mouse deer, palm civet, Indian field mouse, golden jackal, Indian gerbil, long tailed climbing mouse, Indian hare and jungle cat. Also spotted were several roosting birds including a brown shrike. A green vine snake was an excellent spot at speed before we headed back arriving back at the hotel.

Blực Mormon

Tickell's Blực Flycatcher

Malabar Pied Hörnbill

We arrived for lunch in Kitigala and arranged for an afternoon birdwatching session but heavy rain prevented us leaving the hotel and we put back the night jungle walk until 3.30am. After the evening meal we did pop out in between the showers into the hotel grounds where we found several shrub frogs and a couple of Rufous horseshoe bats feeding round a streetlamp. Here we found a Tussur Moth resting. It was off to bed for a few hours. We were ready at 3.30am complete with leech socks and headtorch. We crossed the river in a small boat as brown bats hawked over the water, then walked through a village spotting more frogs and toads a couple of scorpions and a freshwater crab en-route. The rain had stopped but it was very wet underfoot and the leeches were out in force. It was not long into the walk when I found some eyeshine and we located our main target a red slender loris, it was a youngster and Dulan quickly found its mother nearby. As dawn approached we heard a Sri Lankan frogmouth and tracked it down, and the birds started to become active Sri Lanka Hill myna and Sri Lankan Crested Drongo of note until Dulan located a roosting Serendib scops owl. We headed back to the hotel and found some Sri Lankan hanging parrots and a green forest lizard on the way.

Tússúr Álölh

Höurglass Tree Frög

Sri Lanka Fragmayth

After breakfast we headed to a local house and explored its amazing garden we had a brief view of **Chestnut** backed owlet, a nice brown mongoose and eventually the **Oriental dwarf kingfisher** that nests there. We did some local birding near our hotel plum headed and **Layard's parakeets** and a selection of the commoner species in what was extremely humid and hot conditions. I somehow twisted my knee and was hobbling around which was lucky as we were just ambling round birding but we found nothing we had not seen before.

We had lunch back at the hotel but torrential rain prevented any afternoon activities and the rain continued until after dinner and apparently until the early hours. So once again this heavy rain made us put back our jungle walk until 3am at least I had a chance to rest my knee.

We were better prepared to keep the **leeches** at bay on this walk and I only had one bite all night. We had a good view of a **Yellow striped chevrotain**, several nice **frogs** and **toads**, a **whip scorpion**, **green forest lizard**, **Taylors skink** and a cracking **bird eating spider**. As dawn arrived we did some birding back to the village and a little beyond, **lesser yellownape** of note and a good selection of commoner species. We also got a brief view of some **flamebacked squirrels** and in a palm tree some roosting **Greater short nosed fruit bats** highlights mammal wise. We headed back to the hotel for a well-deserved breakfast and a shower.

Örange Tailed Mul

Serendib Scops Owl

Greater Short Nosed Fruit Bat

Sri Lanka Hanging Parrot

Green Forest Lizard

After breakfast we headed to our next base, stopping briefly at a local site where we had a nice **common birdwing** and we headed off to Udawalawa. The journey was broken by an accident where a moped and our people carrier crashed. One of the 4 occupants of the 50cc moped had some cuts but despite little or no protective clothing everyone was pretty much OK which was a relief.

We had to go to the police station for the formalities, an **ashy drongo** family entertained us for a while, but it became apparent that this would be an extended stoppage and eventually we transferred into an alternative vehicle with a new driver to continue our journey.

But the delay did mean we would miss the bat cave visit. We arrived at Udawalawa where the combination of poor weather and late arrival made us postpone our jeep drive into the park until the next morning so we had a quick birdwatch at a nearby wetlands which was quite productive. There were a whole host of species a nice white bellied sea eagle, black winged kite, pacific golden plover, forest wagtail, yellow wagtails, Oriental skylark, ashy crowned sparrow lark and some prinias.

After dinner we did a quick drive round the local area when our original vehicle had been released and caught up with us. A bit of a wasted day really and I was a little frustrated about missing the bat cave.

Çömmön Birdwing

Grey Langur

Índian Flying Fox

Örtental Darter

Green Yine Snake

We were up early and took a jeep into the reserve, we had some great views of crested hawk eagle and sirkeer malkoha, crested tree swifts and many other birds. Mammal wise we had a few water buffalo and fortunately we came across another jeep which had located an elephant and late morning we headed off the short distance to Tissa our next hotel near Bundala and Yala. We had a brief stop on the way so see a large roost of Flying foxes. It was New Year's Day so we participated in the festivities before lunch. Then we headed off to Bundala NP, this was a cracking reserve and I really enjoyed our journey round, also there was hardly anyone in it we only met two jeeps at the coastal viewpoint but nothing apart from that. We had some distant elephants, a nice selection of birds kingfishers, waders, egrets before locating an elephant leaving a pool and we got some nice views. But the pick were a cobra and a black necked stork one of just a dozen birds in Sri Lanka! (And we saw another the following day) We had a nice elephant near the exit of the reserve and a ruddy mongoose elsewhere in the reserve. We did a short night drive the highlight a Flowered wolf snake and a Little Indian Field Mouse.

Spot Billed Pelican

Índian Cobra

White Bellied Sea Eagle

A 4.30 start and we joined the queue to get into Yala NP, apparently much smaller than usual, perhaps due to the New year celebrations. A leopard had been seen not far from the entrance and the large gathering of Jeeps was the shape of things to come. We headed off spotting a few birds but it was mammals we were after and we were not far from the site where another **leopard** was spotted and we got a brief view of it as it moved off but it was relocated a short distance and it showed very well playing with a cloth before sitting on a rock to rest. It was a bit of a jeep mele but everyone got decent views.

We had a brief view of another leopard a little later, we toured round seeing a good selection of birds some sandplovers and small pranticole of note. It was time for lunch and we stopped with the other jeeps on the coast car park, here we found a tree frog in the Gents and I got a few weird looks taking my camera in! A couple of fan throated lizards were spotted and we had some nice views of ashy headed prinia and a few other common birds. We headed back into the reserve when news from the other group who had arrived in the park had just seen a sloth bear, we joined them but it had moved on. Dulan had a thought and we moved to a parallel road after a short time the bear appeared and walked right past the jeep, a couple of other jeeps appeared in time for a view and the bear headed off into deep cover. We did a bit more round the reserve spotting another black necked stork, several waders, cracking sambar stag and an elephant but decided we had seen most things we headed off.

We visited a wetlands not far from the hotel, which as it was a very public site the birds were very used to people and we had great views of pheasant tailed jacana, white breasted waterhen, yellow bittern, black bittern, purple heron, purple swamphen a family of barn owls and plenty of others. Flying foxes were leaving their roost hundreds of these massive bat flying overhead, unfortunately these fruit eaters did not help with the increasing numbers of biting insects pestering us and we gave up and headed for dinner.

The night drive was almost in convey with the other group and it was very productive, **jungle cat**, **small Indian civet**, **elephants**, **Indian gerbil** but the highlight was brilliant views of a **fishing cat**, we saw another one but not as well.

Slöth Bear

Small Pratincole

Jacobiń Cúckoo

Rψφψ Μοήδοσε

Índian Þalm Sgýirrel

Star Törtöise

Only a 6am start this morning and we headed to a different part of Yala, here only 3 jeeps lined up at the entrance, so today would be a very different experience. We had several **ruddy mongoose** sightings, a **Greater racket tailed drongo** was the best bird sighted. It was a couple of hours in before we came across a **leopard** walking along a track and it showed very nicely and we had it to ourselves, another jeep eventually turned up but the **leopard** had already gone and we had had a great encounter.

We had a nice selection of birds roosting Indian nightjar, woolly necked stork and plenty of common species. We saw a softshell turtle, marsh mugger and a brief view of Indian grey and striped necked mongoose and spotted deer everywhere.

We headed back to the hotel for lunch, then headed off making several stops at peoples gardens. At each garden there would be a stake out for something of interest.

A nice **Jungle owlet** at one, **Indian scops** owl at another and some **flamebacks** at another, but two sites that usually held painted bats did not hold any which was a shame but we saw plenty of common species at all sites in addition to the specialities. We arrived at our Hotel in Mirissa in time for dinner but did not do any night activities due to the weather.

Chital

Pheasant Tailed Jacana

Water Búffalö

White Browed Fantail

Land Monitor

I was a little worried about overnight weather conditions, the strong winds had made the sea a little choppy. We left before the harbour at 7am spotting a **striated heron** on the quayside as we departed. It was not long before we encountered some **bottlenosed dolphins** and then some **long snouted spinner dolphins** which played with a couple of the boats bow riding.

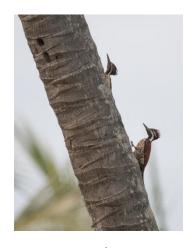

The sea was a little choppy and I felt a little queasy for a lot of the trip. We headed out into deep water searching for large whales. We searched for hours without success and there was no birdlife at all either. Eventually we headed back to harbour but made a detour to catch up with another boat who had come across a couple of **Risso's dolphins**. It was great to be back on dry land and we headed back to the hotel for lunch. After lunch we headed out to visit a few site for birds including a hotel which has a **brown mongoose** family resident. We found one of the family behind an out building.

Next stop was a friend of Dulan who rescues snakes and educates people about them. He had a few captive one used to show schools and he was kind enough to show us them. We headed back to the hotel for dinner. After dinner we returned to the mongoose hotel to look for porcupine but even with a nice selection of fruit they never showed. So about 1am we headed back to the hotel for some sleep.

Jerdőńs Nightjár

18th April 2018

We were up early once again and headed for a second whlae watching trip. We were out of the harbour before 7am and headed out to sea. Fortunately the sea gods were kind to me today and the sea was like a millpond. This not only made my trip easier but made it easier to see cetaceans and it was not long until we found a **Bryde's Whale.** It showed amazingly well for about 20 mins before we left it in peace. It was quite some time until we found the next whale and this one was a beauty. A **blue whale** showed off and on it moved incredibly fast and we had trouble keeping up with it. This was a brilliant end to the whale watching trips. As we headed back to the harbour we encountered a few birds. A **Bridled Tern, little tern, wedge tailed shearwater** and both **greater** and **lesser crested terns.**

After lunch we headed to a local garden our target which I was not privy to was not present but we found some nice southern race purple faced leaf monkeys before heading back to Colombo. The drive was largely uneventful but we did see golden jackal and painted stork. We reached our hotel at 5pm and said goodbye to our guide and driver.

Ýellöw Biltern

19th April 2018

We spent the day wandering round Colombo seeing the tourist sites in blisteringly hot temperatures up to 34°C. Cool drinks stops were frequently made as we wandered round.

The city held quite a bit of wildlife, **palm squirrels** in the parks, **common mynas, Indian pond herons** and **cattle egrets** were particularly common in any green space.

One of the large parks held some **Muscovy ducks**, **red wattled lapwings**, and **ring necked parakeets**. There were large numbers of **feral pigeons** and **spotted doves** everywhere.

The pools in the parks held many dragonflies including slender skimmers.

The most unusual sighting was nesting **spot bellied pelicans** in a couple of trees on some scrub ground.

Both brown and black rats were seen during our wander.

We flew to Dubai the following morning.
