

Vienna and Lake Neusiedl, Austria

This was mainly a family trip, but it took little efforts at persuasion to visit the famous hamsters and sousliks of Vienna. The sites are well known, so I don't repeat them here. In Seewinkel/ Lake Neusiedl I was able to set live traps for two nights at the northern end of Zicksee at St. Andrä, which proved very productive. The outer reed zone and bushes had four species of *Apodemus* and Harvest Mice. The camping ground there is good for Sousliks, Eastern Hedgehogs and some bats, while a polecat there was only *putorius* and not the hoped for *eversmannii*.
