

What does a “heat scope” look like in action? Pulsar Helion XQ38F, as follows.

- (1) Fake mouse and scale bar. (Actually, it is a finger puppet.)
- (2a) Fake mouse in grass lit by torch (exact center of image).
- (2b) Fake mouse heated with warm water and re-located using heat scope.
- (3a) Fake mouse in a tree lit by dim torch.
- (3b) Fake etc with heat etc.
- (4) Lucy the dog who wanted me to take her picture.

No actual mice wild or captive were harmed in the making of this experiment. Dog received a treat for releasing the fake mouse and not eating it like the chew toy it so clearly was intended to be.
